

Ears and Eyes

With Pictures

Ears and Eyes is a searchable database of cases of physical surveillance devices (microphones, cameras, location trackers...) hidden by law enforcement and intelligence agencies to surveil people or groups engaged in subversive activities.

Part 2/2

Italy–Unknown country

No Trace Project / No trace, no case. A collection of tools to help anarchists and other rebels **understand** the capabilities of their enemies, **undermine** surveillance efforts, and ultimately **act** without getting caught.

Depending on your context, possession of certain documents may be criminalized or attract unwanted attention—be careful about what zines you print and where you store them.

A **surveillance device** was found **inside the desktop phone** of a journalist seemingly targeted for their support to the news organization Wikileaks. The phone, a “Cryptophone” based on the “Snom 870” desktop phone, enabled encrypted voice communications with other Cryptophones. The surveillance device included a battery pack and a shielded module with several electronic components. It was able to record what was said on the phone and could be triggered remotely through radio frequencies to send the recorded data. Components of the phone were modified to install the surveillance device. The device was probably installed by the CIA (Central Intelligence Agency).

PICTURES

Modified version of the phone’s largest circuit board (with surveillance device). The battery pack (in blue) and the shielded module (in light brown) are part of the surveillance device.

Modified version of the phone’s largest circuit board, with the cover of the shielded module removed.

On the left: modified version of the phone’s largest circuit board (with surveillance device) without the battery pack. On the right: unmodified version.

The phone’s smallest circuit board, with added wiring to allow recording of audio by the surveillance device on the other circuit board.

Milan, September 2012

A **listening and geolocation device** was found on a scooter. It was located **in the spare wheel bracket, next to the tank and behind the horn grid**. It was based on a device sold by Telit (an Italian supplier of wireless technologies). The

device model was “Telit GM862-GPS”. It was capable of listening with a microphone, geolocating with a GPS antenna, and transmitting the collected information on the mobile phone network with a GSM antenna. The device was located in the spot where the tank is along with a transformer and an accumulator. Both antennas (GPS and GSM) were connected to the device and ended up in the spare wheel bracket. The microphone, also connected to the device, ended up behind the horn grid. Wires connected the device to the scooter starting system. All these components were attached to the scooter frame by strong magnets secured by tape. This scooter model doesn't have a battery (it dates back to the 1980s) and its engine generates alternating current, hence the presence of a transformer and an accumulator to power the device even when the scooter was not moving.

Lecce, December 2017

Microphones and a GPS tracker were found in a car. They were located **in the fuse box**. The car had been having electrical problems (the battery had discharged twice in a month, sign of an abnormal electricity consumption), presumably because of the devices.

PICTURES

United States

Vehicles

Boulder, July 2003

GPS trackers were found under three cars. They were **attached by powerful magnets behind the rear bumpers on the driver's side**. Each one contained a battery pack made of four lithium D cell batteries, a GPS antenna, a cellular antenna and a main component box. The component box contained a GPS receiver, a computer chip and a cellular modem. All the components were wired together. The trackers were probably installed by the FBI (Federal Bureau of Investigation).

London, April 2018

Several surveillance devices were installed from 2015 to April 2018 in the Ecuadorian embassy in London to surveil Julian Assange, founder of the news organization Wikileaks, which had taken refuge in the embassy since 2012. During this period of time:

- **The interior cameras were replaced with higher resolution cameras equipped with hidden microphones.**
- **Microphones** were hidden **inside a fire extinguisher** and **above the storage cabinet in the bathroom** used by Assange.
- **Special stickers** were attached **on the exterior windows of the embassy** to facilitate the use of a laser microphone (able to capture audio by detecting the sound vibrations in the windows) from a building nearby.
- **A device capable of transmitting in real-time the information collected by the other devices** was installed.

The microphone inside the fire extinguisher was equipped with an SD card and a battery which was changed every twelve hours. The microphone in the bathroom was connected to the electrical system of the building. The devices were installed by the Spanish company Undercover Global, officially in charge of the security at the embassy. Their installation appeared to have been ordered by the CIA (Central Intelligence Agency).

of the car roof upholstery and the windscreen. The GPS tracker was located **in the fuse box**. Everything was powered by a connection to the headlights cable. The headlights were dysfunctional, seemingly because of the power supply required by the devices.

Milan, November 2010

Microphones and a micro-camera were found in multiple homes. The devices were found **in an amplifier, in the kitchen hood and in a cathode-ray television**. They included microphones and 300 MHz transmitters with ranges of 200 to 300 meters. One of the devices could be activated by remote control (at a distance of hundreds of meters). Another device came with a micro-camera linked to a UHF band transmitter.

Bordighera, May 2012

Four microphones and a camera were found in a house. A microphone was located **behind the fridge**, another **in the bedroom**, another **in a beam next to the ceiling light**, another **in the house entry**. A small camera **filmed the entry stairs**. All were connected through a transformer to the house electrical network.

Naples, February 2013

Four microphones were found in two homes. In the first home, a microphone was located **next to the office where there was a computer** (for some time, the loudspeakers connected to this computer were disrupted by an interference similar to the interference of a phone receiving a call), another **in the outlet next to the kitchen table**, and the last one **in the bedroom, in the outlet closest to the bed** (the outlet cover had been pierced to direct the microphone towards the headboard). In the second home, a microphone was located **in the bedroom, in the outlet closest to the door** leading to the kitchen, so that it covered several rooms. The first home's microphones included a transformer and antennas with a printed circuit board. The second home's microphone included two transformers and an antenna.

Valencia, March 2015

A **geolocation device** was found on a car. It was **magnetically mounted inside a wheel well of the car**. It included a battery, a GPS antenna, a GSM antenna, and a SIM card. Its components were wrapped in black tape and magnetically mounted to the car mudguard and frame. It was probably installed by the *Cuerpo Nacional de Policía* (Spain national civilian police force).

Moscow, December 2020

A **surveillance device** was found **inside the smartphone** of the campaign manager of a Russian anti-corruption activist. It included a SIM card, a microphone, a GPS tracker, and a microcircuit to amplify the radio signal. Some of the phone components were modified to make room for the surveillance device. The device was installed when the owner of the phone was in custody and her phone confiscated. The device was probably installed by the FSB (“Federal security service”).

New Zealand

Vehicles

Levin, April 2010

A **GPS tracker** was found under a car. It was **attached to the car with magnets**. It used a mobile phone connection to report the car position. According to the articles that reported the discovery of the tracker, the information it collected was sent to Thompson and Clark, a New Zealand private investigation agency. The surveillance was probably carried out on behalf of a company.

According to the articles that reported the discovery of the tracker, it was supplied to the private investigation agency Thompson and Clark by the New Zealand company **Argus Tracking**. As shown by the high resolution pictures of the device, its model was “GT-2000XT-D”, and it was very similar to the device “GT-2000”, marketed by the company based in United Kingdom **Custodia Systems**.

Cuneo, June 2019

A surveillance device capable of recording images and sound was found during a gathering in front of a jail. It was located **behind a few stones, in a wall along a path**, wrapped in a black garbage bag. It was not the first time that a gathering took place there. The device contained a battery, a SD card, a microphone, and a camera hidden behind a rock in which a hole had been made. It seemed that the device couldn't send the recorded data, which was stored on the SD card. An analysis of the content of the SD card showed that the device was activated on June 3 and was installed on the afternoon of June 7, the day before the gathering.

The pictures of the device show that the device included a digital video recorder of model "DK-PV500E", marketed by the Italian company DSE (Digital Surveillance Equipment). This suggests that the device was supplied by the Italian company **DSE**.

Trento, March 2019

Six microphones and a camera were found in a house. The microphones were located **in electrical outlets and switch cases**, one **above the intercom in the corridor**, two other **in the living-room**, and the three last ones **in bedrooms**. The camera was located **inside the intercom in the corridor** and connected to the microphone above it. Each microphone was equipped with a battery, and, except for the one in the corridor, with a SIM card and a memory card. The camera lens could observe through a small hole already present in the intercom structure and slightly modified to fit the device.
